

A black, cylindrical Skyflo spout is shown at an angle, pouring a stream of golden-brown liquid into a clear glass. The spout has a silver-colored nozzle and a black body with a white oval-shaped button and four small colored buttons (grey, orange, green, blue). The glass is partially filled with the liquid, and the stream is captured in mid-pour.

Skyflo

Pour. Manage. Profit.

Skyflo is the world's most advanced, wireless liquor management system. Skyflo helps you get the most from your bar with portion control spouts featuring touch functionality and powerful software.

THE PERFECT POUR EVERY TIME

Consistent and precise pours improve drink quality, customer satisfaction and reduce liquor loss. Skyflo spouts can operate hundreds of feet from the master unit, freeing bar staff to focus on providing quality customer service.

SOFTWARE TO HELP YOU IMPROVE SALES

Valuable sales data is tracked and recorded with every drop of liquor dispensed through the Skyflo spouts. View pouring activity in real-time or pull summary reports on-demand.

INCREASE CUSTOMER SATISFACTION AND PROFITS

Improve customer service through speed and efficiency while increasing profits by an average of \$5 per bottle. Skyflo keeps liquor secure, helping you get the most from your inventory.

Wunder-Bar

GET THE MOST FROM YOUR BAR.

Grow your business by customizing Skyflo to suit your needs. Skyflo virtually eliminates liquor loss and unrecorded sales, which could amount to tens of thousands of dollars in savings per year. Skyflo will give you the tools you need to manage your bar effectively and profitably.

Touch technology allows you to select one of four pre-programmed pour sizes

Touch technology allows you to select one of four programmable pour sizes

Software automatically saves your data and provides powerful management tools to help you analyze your sales

Similarly, the In-Line Beerflo monitors and transmits data to software
